

SUSTAINABLE MOBILITY INDEX

Lithuania has taken significant steps toward sustainable and inclusive transport. Since 2015, adoption of Sustainable Urban Mobility Plans in Lithuania has steadily increased [1]. Additionally, the Ministry of Transport and Communications of the Republic of Lithuania's (SUMIN) new Sustainable Mobility Data Platform (SMDP) gathers infrastructure, safety, and climate data in one place.

To turn this data into actionable insights, Kurk Lietuvai program participants Kimberly Kreiss and Greta Šimeliūnaitė, in partnership with SUMIN, are creating the Sustainable Mobility Index.

The Sustainable Mobility Index will combine a wide array of datasets with detailed statistical methods and will allow to compare sustainable mobility progress both within Lithuania and across European countries and cities. Additionally, it will enable the sharing of best practices in Lithuania and a better understanding of where additional investment and attention may be needed.

While the SMDP gathers several official statistics and administrative data from various Lithuanian agencies into one platform, it lacks measures of individual perceptions of transport in Lithuania. To fill this gap, we will conduct a short survey asking questions about transport usage, satisfaction, and perceived barriers to sustainable transport modes. These data will provide crucial information for understanding sustainable mobility in Lithuania. You will also find the survey attached in a separate pdf.

We warmly welcome any additional insights and ideas for QR placement that will allow us to reach as many people as possible. If you are willing to take part, please let us know by Friday, June 20th. We welcome any questions or feedback you might have.

Thank you for your time and consideration!

Kimberly Kreiss ir Greta Šimeliūnaitė, „Sustainable Mobility Index” project managers
